DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 07/10/2006 was filed on the mailing date of the application. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 8-10, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 6562541, Vanbesien et al.

With respect to claims 1 and 8-10, Vanbesien discloses a toner particle which may be mixed with a carrier particle (column 14, lines 1-4). The toner particle comprises a resin and has a matte finish (column 4, lines 28-54). The toner may comprise additives such as PTFE (column 4, lines 62-67) and a polyethylene

Art Unit: 1795

wax (column 7, lines 14-18), Wherein the PTFE has a size diameter of 50-120 nanometers (column 5, lines 15-18). The wax may be present in an amount of up to 30 % (column 14, line 66 - column 15, line 2), and the PTFE may be present in an amount of 10% (column 10, lines 47-49).

With respect to claim 17, Vanbesien discloses that a second resin may be added to the toner particles (column 6, lines 55-58).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6562541, Vanbesien et al. as applied to claim 1 above, and further in view of US Patent 6162573, Grande et al. Vanbesien discloses that the resin may be a styrene butylacrylate resin (column 4, lines 37-41), but fails to teach the thermoplastic resin of the instant application. Grande teaches that suitable binder resin for toner compositions include styrene butylacrylate resins and thermoplastic resins (column 2, line 53 – column 3, line 14). Grande does not disclose the melt flow index of the thermoplastic resin, however because it is a similar resin used in a similar embodiment,

it would be reasonable to conclude that the melt flow index would also be similar. It would have been obvious to one of ordinary skill in the art at the time of the invention to use the thermoplastic resin of Grande in place of the styrene butylacrylate resin of Vanbesien because Grade teaches that they are functional equivalents.

Election/Restrictions

6. Applicant's election with traverse of group 1 in the reply filed on 10/15/2008 is acknowledged. The traversal is on the ground(s) that claims 34 and 1 are related as combination/subcombination. This is not found persuasive because the instant application was filed under PCT Rules. Restriction is proper where there is lack of unity among the invention. Vanbesien, discussed above, teaches that the toner may be used in any printing process (column 2, lines 53-64) and therefore they do not constitute as a 'special technical feature' among the claims.

The requirement is still deemed proper and is therefore made FINAL.
